How Team 10’s agents work together

AI never computes answers. AI never approves.

AI writes · Code decides numbers & facts · Person decides

ITSG rule book ↓

0 Find sections

- **Cut rule book** — 1,219 pieces
- **Word search** — 66 candidates
- **Source finder** — Haiku · picks + reason
- **Check & score** — drops picks never offered

22 / 22 answer sections found
39 picked · 17 outside our list

22 sections

1 Rules

- **Rule writer** — Sonnet · quote + check link
- **Quote check** — quote in text? bad links out
- **Checker** — Haiku · missing / double
- **Approves** — or rejects

15 rules · 12 linked to a check
3 a person checks

↺ rewrite, max 2 rounds (code counts)
↺ person rejects: rewrite

15 rules + check links

2 Tests

- **Test writer** — Sonnet · situations only
- **Right answers** — rules R1–R6 · bad: BLOCKED
- **Checker** — Haiku · missing tests
- **Approves** — or rejects

0 answers written by AI

↺ rewrite, max 2 rounds (code counts)
↺ person rejects: rewrite

tests + right answers

3 Verdict · each case

- **Read output file** — from payroll software
- **Compare** — only checks linked in stage 1
- **Double-check** — Haiku · PASS → person only
- **Explainer** — Haiku · plain summary
- **Signs report** — once, for all cases

29 / 29 correct · 0 missed errors
147→40→16 AI flags to a person
⛔ broken file: straight to person
code’s error stays an error

dispute: back to tests or rules · max 2

Langfuse records every step — stage 0: own session + recall scores · stage 3: one record per code check · each approval marked person or automatic

Test bench, always alongside — 300 cases, code only → 300 / 300 correct

Numbers from our real runs. In the 29 / 29 run, approvals were automatic (test mode), not signed by a person.
